

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A method ~~for a remote agent~~ of to assisting with control of a subscriber device communications unit ~~from a remote agent~~, the method comprising:
 - receiving from the subscriber device, an instruction message that corresponds to ~~voiced~~ spoken instructions;
 - converting the ~~voiced~~ spoken instructions to control commands;
 - providing a control message corresponding to the control commands; and
 - sending the control message from the remote agent to the subscriber device communications unit, thereby assisting with the control of the subscriber device communications unit.
2. (Currently amended) The method of claim 1:
 - wherein the receiving the instruction message further includes receiving specific information sufficient to identify the subscriber device communications unit; and
 - wherein the converting the ~~voiced~~ spoken instructions includes converting the ~~voiced~~ spoken instructions to the control commands that correspond to a type of subscriber device communications unit.
3. (Currently amended) The method of claim 2 wherein the ~~voiced~~ spoken instructions are converted to the control commands that correspond to keypad activations at the subscriber device communications unit.

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

4. (Original) The method of claim 2 further comprising maintaining a database associated with the subscriber device communications-unit, the database including one of a parameter status and a mirrored database associated with the subscriber device communications-unit.

5. (Currently amended) The method of claim 4:

wherein the ~~voice~~ spoken instructions corresponds to an action comprising one of;

dialing a number,

looking up a number in a phone book of associated with the subscriber device communications-unit, the phone book incorporated into the mirrored database associated with the subscriber device communications-unit,

modifying contents of a memory of the subscriber device communications-unit,

and

sending a text message;

wherein the control commands will effect the action when executed by the subscriber device communications-unit.

6. (Original) The method of claim 1 further comprising sending a confirmation message as confirmation of the receiving the instruction message.

7. (Currently amended) The method of claim 1 wherein the receiving the instruction message occurs at the remote agent and the method further comprises forwarding a first message

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

corresponding to the instruction message to an assistant agent, the assistant agent performing the converting the ~~voiced~~ spoken instructions to the control commands and returning to the remote agent a second message corresponding to the control commands.

8. (Original) The method of claim 7 further comprising selecting the assistant agent from a plurality of assistant agents prior to the forwarding the first message, the selecting based on availability of the assistant agent and a ranking of the assistant agent among the plurality of assistant agents.

9. (Original) The method of claim 8 wherein the availability of the assistant agent is determined by a log on procedure and the ranking of the assistant agent depends on one of an extent of availability of, a timeliness of services provided by, an accuracy of the services provided by, and economic considerations related to the assistant agent.

10. (Currently amended) The method of claim 7 further comprising selecting more than one assistant agent from a plurality of assistant agents and forwarding the first message to the more than one assistant agent, each of the more than one assistant agent performing the converting the ~~voiced~~ spoken instructions and the returning the respective second message to provide more than one respective second messages, the method further comprising comparing the more than one respective second messages to detect an error in the more than one respective second messages.

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

11. (Original) The method of claim 10 wherein the selecting more than one assistant agent further comprises selecting a trusted assistant agent and an unknown assistant agent and comparing the respective second messages to evaluate the unknown assistant agent.

12. (Currently amended) A server arranged and constructed to assist with control of a subscriber device communications unit, the server comprising:

a receiver to receive from the subscriber device an instruction message that corresponds to ~~voiced~~ spoken instructions;

a controller, coupled to the receiver to convert the ~~voiced~~ spoken instructions to control commands and to provide a control message corresponding to the control commands; and

a transmitter, coupled to the controller, to send the control message to the subscriber device communications unit, thereby assisting with the control of the subscriber device communications unit.

13. (Currently amended) The server of claim 12:

wherein the receiver further receives specific information sufficient to identify the subscriber device communications unit; and

wherein the controller converts the ~~voiced~~ spoken instructions to the control commands that correspond to a type of subscriber device communications unit.

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

14. (Currently amended) The server of claim 13 wherein the controller converts the ~~voiced~~ spoken instructions to the control commands that correspond to keypad activations at the subscriber device communications unit.

15. (Currently Amended) The server of claim 13 further comprising a memory for storing a database associated with the subscriber device communications unit, the database including one of unit specific information, a parameter status, and a mirrored database associated with the subscriber device communications unit.

16. (Currently amended) The server of claim 15:

wherein the controller converts the ~~voiced~~ spoken instructions to the control commands that, when executed by the communications unit, will effect an action comprising one of;

dialing a number,

looking up a number in a phone book of the subscriber device communications unit, the phone book incorporated into the mirrored database associated with the subscriber device communications unit,

modifying contents of a memory of the subscriber device communications unit, the modifying also performed on the mirrored database associated with the subscriber device communications unit, and

sending a text message.

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

17. (Original) The server of claim 12 wherein the controller controls the transmitter to further send a confirmation message as confirmation that the receiver received the instruction message.

18. (Currently amended) The server of claim 12 wherein the controller further controls the transmitter to forward a first message corresponding to the instruction message to an assistant server, the assistant server performing the converting the ~~voiced~~ spoken instructions to the control commands and returning to the server a second message corresponding to the control commands.

19. (Original) The server of claim 18 wherein the controller further selects the assistant server from a plurality of assistant servers prior to the forwarding the first message, the assistant server selected based on availability of the assistant server and a ranking of the assistant server among the plurality of assistant servers.

20. (Original) The server of claim 19 wherein the availability of the assistant server is determined by the controller based on a log on record stored in the memory and wherein the controller determines the ranking of the assistant server based on data maintained in the memory corresponding to one of an extent of availability of, a timeliness of services provided by, an accuracy of the services provided by, and economic considerations related to the assistant server.

21. (Currently amended) The server of claim 18 wherein the controller selects more than one assistant server from a plurality of assistant servers and controls the transmitter to forward the

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

first message to the more than one assistant server, each of the more than one assistant servers performing the converting the ~~voiced~~ spoken instructions and the returning the respective second message to provide more than one respective second messages, the controller further comparing the more than one respective second messages to detect an error in the more than one respective second messages.

22. (Original) The server of claim 21 wherein the selecting more than one assistant server further comprises selecting a trusted assistant server and an unknown assistant server and comparing the respective second messages to evaluate the unknown assistant server.

23. (Currently Amended) A software program for assisting with control of a subscriber device communications unit, the software program when loaded and executing on a processor of a server resulting in the server performing a method comprising:

receiving an instruction message from the subscriber device that corresponds to spoken ~~voiced~~ instructions;

converting the spoken ~~voiced~~ instructions to control commands;

providing a control message corresponding to the control commands; and

sending the control message to the from the server to the subscriber device ~~communications unit~~, thereby assisting with the control of the subscriber device ~~communications unit~~.

24. (Currently Amended) The software program of claim 23:

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

wherein the receiving the instruction message further includes receiving specific information sufficient to identify the subscriber device communications unit; and

wherein the converting the spoken ~~voiced~~ instructions includes converting the spoken ~~voiced~~ instructions to the control commands that correspond to a type of subscriber device communications unit.

25. (Currently Amended) The software program of claim 24, the method further comprising maintaining a database associated with the subscriber device communications unit, the database including one of a parameter status and a mirrored database associated with the subscriber device communications unit.

26. (Currently Amended) The software program of claim 23 wherein the receiving the instruction message occurs at a distribution server and the method further comprises forwarding a first message corresponding to the instruction message to an assistant agent, the assistant agent performing the converting the spoken ~~voiced~~ instructions to the control commands and returning to the distribution server a second message corresponding to the control commands.

27. (Original) The software program of claim 26, the method further comprising selecting the assistant agent from a plurality of assistant agents prior to the forwarding the first message, the selecting based on availability of the assistant agent and a ranking of the assistant agent among the plurality of assistant agents.

Appl. No. 10/608,989
Amendment dated July 25, 2005
Reply to Office Action of April 25, 2005

28. (Original) The software program of claim 27 wherein the availability of the assistant agent is determined by a log on procedure and the ranking of the assistant agent depends on one of an extent of availability of, a timeliness of services provided by, an accuracy of the services provided by, and economic considerations related to the assistant agent.

~~30~~29. (Currently Amended) The software program of claim 26, the method further comprising selecting more than one assistant agent from a plurality of assistant agents and forwarding the first message to the more than one assistant agent, each of the more than one assistant agent performing the converting the spoken ~~voiced~~ instructions and the returning the respective second message to provide more than one respective second messages, the method further comprising comparing the more than one respective second messages to detect an error in the more than one respective second messages.

~~34~~30. (Currently Amended) The software program of claim ~~30~~ 29 wherein the selecting more than one assistant agent further comprises selecting a trusted assistant agent and an unknown assistant agent and comparing the respective second messages to evaluate the unknown assistant agent.
